## LabConneX Quick Guide

Last Revised: July 25, 2012

**Introduction:**

LabConneX Portal (LXP) is designed to simplify communication between the Labs and their vendors (Production Lab) where the cases are produced. This application is fully integrated to DLCPM and consists of several options.

**Case Communication:**

The production labs will be able to see the list of Cases sent to them, add calls, and have it transfer to the Lab with notification option. The Lab can then gather the requested info and reply back to the Production Lab. The calls may be created at either side.

**Tracking Shipment:**

This option would allow the production labs to scan Inbound and Outbound cases. The reporting system in DLCPM would allow the labs to insure all cases sent are received at the production Lab. The Outbound scan would allow the Labs to know what cases were shipped and what they should expect in the next shipment.

**Call List:**

The communications for each case is displayed on the communication page but the call list simplifies the process by showing a list of Pending Calls for all cases.

**Other Options:**

Production Labs may also print work order, upload images, and view the existing images.

Please review the following pages describing each feature along with the screen shots.

On the first tab for Case Communication you may view all cases shipped to your Lab.
